Holter / Ambulatory ECG

Date: 01 Jan 2026

Patient	FICTIONAL PATIENT	**Identifier**	DEMO-001

Recording

Indication: Intermittent palpitations (fictional).

Device / leads: Three-channel ambulatory ECG recorder.

Start and finish: 01 January 2026 09:00 to 02 January 2026 09:00 (fictional).

Analysable duration: 23.5 hours

Signal quality / artefact: Thirty minutes excluded for artefact.

Relevant medication during recording: No rate-modifying medication recorded in this fictional example.

Rate and rhythm

Predominant rhythm: Sinus rhythm.

Minimum heart rate: 49 beats/min

Mean heart rate: 74 beats/min

Maximum heart rate: 128 beats/min

Timing / context of rate extremes: Minimum during recorded sleep; maximum during diary-recorded activity.

Events

Supraventricular ectopy: count, burden, runs: 35 isolated supraventricular ectopics; no sustained run identified.

Ventricular ectopy: count, burden, complexity: 12 isolated ventricular ectopics; no couplet or run identified.

Atrial fibrillation / flutter: episodes and burden: No episode identified in the analysable recording.

Pauses / conduction disturbances: No significant pause or advanced block identified on manual review.

Symptoms, event times and rhythm correlation: One diary entry at 14:20 correlated with sinus rhythm at 86 beats/min.

Other findings and verification: Representative strips reviewed; automated events require verification.

Conclusion

Impression: Predominantly sinus rhythm with occasional isolated ectopy in this fictional recording.

Recommendations / urgent communication: Referring clinician to interpret in context; no treatment recommendation is generated.

Clinician: DEMONSTRATION ONLY - NOT SIGNED **Signature:** _____
