Renal Ultrasound / Renal Artery Doppler

Date: 01 Jan 2026

Patient	FICTIONAL PATIENT	**Identifier**	DEMO-001

Context

Indication: Assessment of renal morphology and arterial flow (fictional).

Technique / vessels sampled: B-mode, colour and spectral Doppler; bilateral main renal arteries sampled.

Technical limitations: No accessory artery confidently demonstrated; this does not exclude one.

Renal morphology

Right renal length: 10.7 cm

Left renal length: 10.9 cm

Cortical appearance / thickness: Preserved corticomedullary differentiation in the acquired images.

Collecting systems, calculi and focal lesions: No collecting-system dilatation seen.

Bladder / residual if assessed: Not assessed in this vascular-focused examination.

Aorta and Doppler technique

Aortic peak systolic velocity (PSV): 82 cm/s

Doppler angle / technical notes: Angle correction documented on stored traces.

Renal venous flow: Flow demonstrated bilaterally.

Right renal arterial Doppler

Proximal PSV: 96 cm/s

Mid PSV: 88 cm/s

Distal PSV: 84 cm/s

EDV at highest-velocity sample: 28 cm/s

Renal-aortic ratio (entered, not calculated): 1.17

Intrarenal RI: upper / mid / lower: 0.61 / 0.60 / 0.62.

Waveforms / acceleration findings: Waveform appearances documented on stored traces.

Left renal arterial Doppler

Proximal PSV: 101 cm/s

Mid PSV: 88 cm/s

Distal PSV: 84 cm/s

EDV at highest-velocity sample: 28 cm/s

Renal-aortic ratio (entered, not calculated): 1.23

Intrarenal RI: upper / mid / lower: 0.61 / 0.60 / 0.62.

Waveforms / acceleration findings: Waveform appearances documented on stored traces.

Conclusion

Impression: Bilateral renal measurements and sampled velocities documented. No automatic stenosis classification.

Recommendations / communication: Interpret with laboratory criteria, technical adequacy and the clinical assessment.

Clinician: DEMONSTRATION ONLY - NOT SIGNED **Signature:** _____
