Thyroid and Neck Ultrasound

Date: 01 Jan 2026

Patient	FICTIONAL PATIENT	**Identifier**	DEMO-001

Examination

Indication: Palpable thyroid prominence (fictional).

Prior imaging / intervention: No prior examination supplied.

Technique and limitations: High-frequency ultrasound with colour Doppler; no technical limitation recorded.

Thyroid gland

Right lobe dimensions: 45 x 16 x 17 mm.

Left lobe dimensions: 43 x 15 x 16 mm.

Isthmus AP thickness: 3 mm

Parenchymal echotexture and vascularity: Background echotexture homogeneous.

Nodule record (duplicate for additional nodules)

Nodule identifier and location: Nodule 1; right mid pole.

Three dimensions / largest diameter: 12 x 9 x 8 mm; largest diameter 12 mm.

Composition: Spongiform.

Echogenicity: Predominantly isoechoic solid components.

Shape: Wider than tall.

Margins: Smooth.

Echogenic foci: No suspicious echogenic foci described.

Clinician-assigned TI-RADS system / category: Not assigned in this layout demonstration.

Interval change: No comparison available.

Neck and conclusion

Cervical lymph nodes: site and morphology: No morphologically suspicious node identified in the examined neck.

Other neck findings: No additional focal finding documented.

Impression: Right thyroid nodule as described; classification requires clinician review.

Clinician recommendations / communication: Record an individual recommendation using the applicable guidance; none is generated automatically.

Clinician: DEMONSTRATION ONLY - NOT SIGNED **Signature:** _____
